

LABPRO - DRYER

We offer industrial drying ovens that are used to remove surface moisture on the phosphate component prior to painting operation. These are engineered to maintain precise temperature control over a wide range of temperature for different paint finishes. Utmost care is taken for the safety and maintenance aspects at the initial design stage. Our ovens are known for their energy saving properties and cost effectiveness, attributes that ensure profitability in competitive market. Our range of ovens is characterized by the following features:

- Optimum air flow design
- High density insulation
- Variety of heating media like Electrical/ Diesel/ Gas can be used
- High efficiency burners for complete combustion
- Automatic temperature controls
- Unique design of heat exchanger for improved heat transfer efficiency ‘
- Temperature 600degree C
- Size 18 X 18 28 inch
